EDUCATION

AKG ENGINEERING COLLEGE

BACHELOR OF TECHNOLOGY IN IT

July 2022 - 2026 | CGPA: 8.1 / 10

SKILLS

TECHNICAL SKILLS

Languages:

Python, C++, SQL, Java

AI & Machine Learning:

Generative AI, LLMs, AI Agents, Agentic AI, YOLO, Computer Vision

Frameworks & Libraries:

Google ADK, FastAPI, OpenCV, NumPy, Pandas

Backend & APIs:

REST APIs, API Integration, Database Integration

Data & Storage:

MySQL, SQL

Tools:

Git, GitHub, PyCharm, VS Code

Core Concepts:

DSA, OOP, DBMS, Operating Systems, Computer Networks

CERTIFICATIONS

INFOSYS SPRINGBOARD

Object-Oriented Programming using Python

CODING NINJAS

C++ & Data Structures and Algorithms

ACHEIVEMENTS

DSA Mastery: Solved 850+ Data Structures and Algorithms problems across coding platforms.

Competitive Programming:

Demonstrated consistent problem-solving through regular practice of Data Structures, Algorithms, and coding challenges.

Open Source Version Control: Managed multiple Git branches and collaborated using **Git/GitHub** while maintaining production-ready project repositories.

SUMMARY

Agentic AI Engineer with hands-on experience in Python, LLMs, and AI agent development. Skilled in RAG, prompt engineering, FastAPI, REST APIs, SQL, and backend development, with knowledge of OOP, DBMS, OS, and software engineering fundamentals. Strong problem-solving skills with 500+ DSA problems solved.

EXPERIENCE

VAASTAV TECHNOLOGY | SOFTWARE DEVELOPER

Dec. 2025 -- Present

- **Python Application Development:** Developed modular Python CLI applications and reusable modules, applying **OOP, abstraction, encapsulation, and modular architecture** to improve code maintainability and reusability.
- **C++ & Boost Components:** Developed C++ components using **Boost libraries** for efficient data processing, **reusable utilities**, and application-level functionality, with emphasis on performance and modular design.
- **Iterator Abstraction:** Implemented **decoupled iterator abstractions** to separate traversal logic from underlying data structures, enabling flexible iteration mechanisms and reducing component-level coupling.
- **Data Signing & Verification:** Implemented **data signing and verification workflows** to validate data integrity and authenticity, supporting secure data exchange and **application-level validation**.
- **Software Architecture:** Applied **SOLID principles, separation of concerns, dependency decoupling, and abstraction** to design extensible software components with improved maintainability and reusability.
- **Code Quality & Refactoring:** Refactored existing implementations to reduce **code duplication and coupling** while improving readability, maintainability, and extensibility of software modules.

PROJECTS

AI AGENT-BASED TEXT-TO-SQL SYSTEM

PYTHON, GOOGLE ADK, MYSQL,LLM,NLP,GITHUB

- **Natural Language Processing:** Engineered an **NLP-driven pipeline** that translates user intent into executable **SQL** through **LLM-powered semantic** interpretation and **contextual prompt orchestration**.
- **Agentic Database Interaction:** Integrated **Google ADK** with **MySQL** tools for **schema-aware** query handling, automated **database operations**, structured result retrieval, and modular **agent-tool communication**.
- **Validation & Local Execution:** Established an end-to-end **localhost workflow** for **SQL validation, database connectivity, iterative testing**, and response verification, maintaining separation between reasoning, execution, and application logic.
